

Building the Library of Simio Models For Health Care Industry.

Dušan Šormaz, Mandvi Malik
Department of Industrial and Systems Engineering
Ohio University, Athens, OH

OHIO
UNIVERSITY

Agenda

- Introduction
- Motivation
- Approach
- Custom objects
- Add-Ins
- Case studies

Ohio University

- Ohio University has ~20000 students on Athens Campus
- First University west of Appalachians
 - Founded in 1804 in Athens, OH
- Russ College is home to National Academy of Engineering's Russ Prize

Motivation

- Many hospitals have similar processes
- Both design and operation need to consider alternative arrangements
 - Number of fixed resources – beds
 - Number of health resources – doctors and nurses
- Need for performance evaluations
- Custom objects and add-in provide flexibility and rapid model analysis

Approach

- Process analysis
- Data analysis
- Define custom objects
- Implement Add-in
- Method evaluation – case studies

Process Analysis

- Visited several hospitals (health systems)
 - Emergency room
 - Progressive care units
 - Operating Theater
- Perform patient and resource flow analysis
- Identify resources needed

Progressive Care Unit

*Patient
arrives from
other
departments*

Admission

Bed

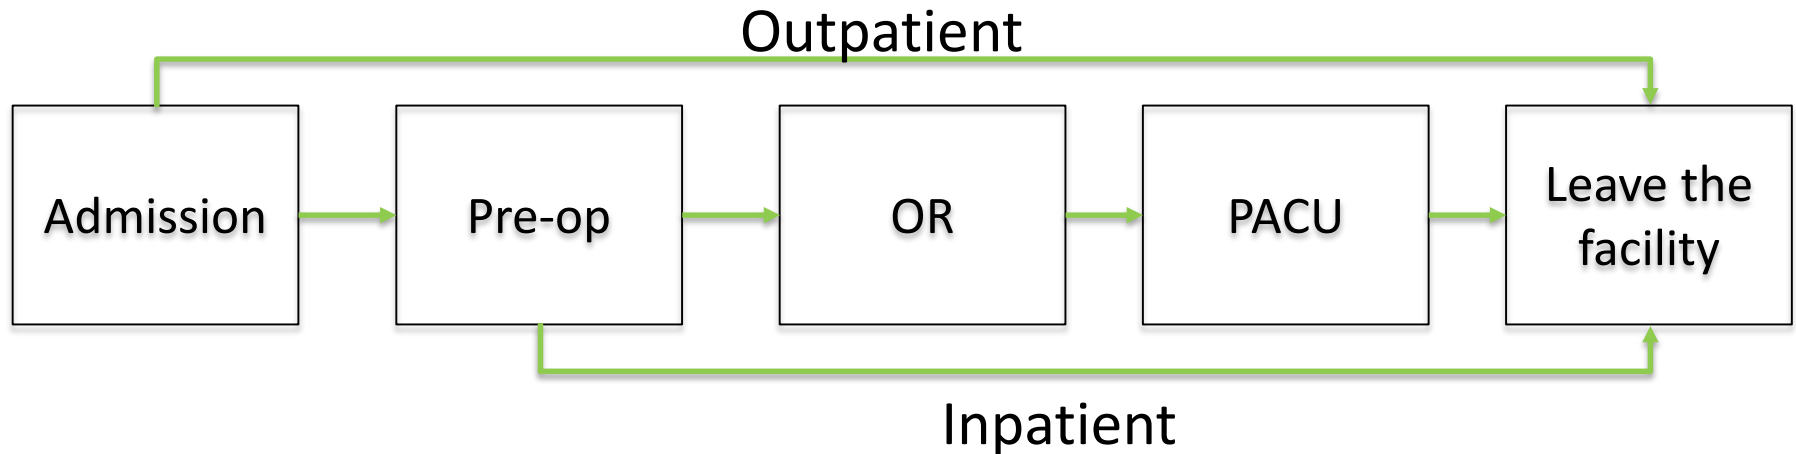

Discharge

*Transfer-In
Patients*

*Transfer-In
desk*

Patient recovery in the bed is supported by several resources: nurse, nursing assistant, therapist
Patient may recover or deteriorate

Operating Room Process

Process details

- *Different surgery types*
- *Multiple resources*
- *Anesthesia can be done in pre-op or OR*
- *Pre-OP and PACU units ay be interchangeable*
- *Circulating nurse and surgeon – not implemented*

Custom Objects

- Progressive Care Unit
 - PCU Patient
 - Bed
- Operating Theater
 - OR Patient
 - Patient Arrival
 - Pre-OP Room
 - Operating Room

PCU Patient

- Patient Type
- Resources
- Treatment times

OR Patient Arrival

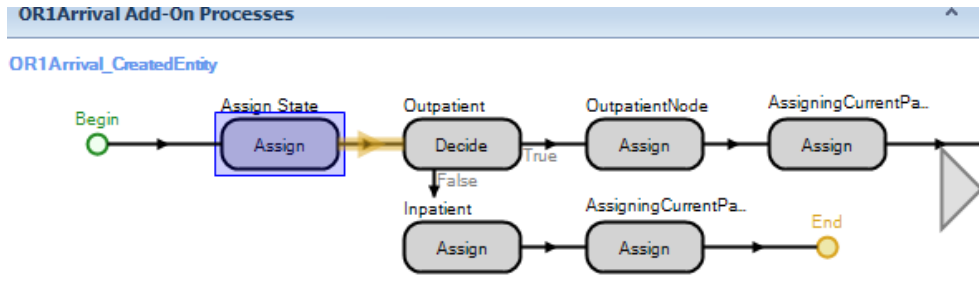

Define arrival
properties

Patient comes
based on the
arrival
properties

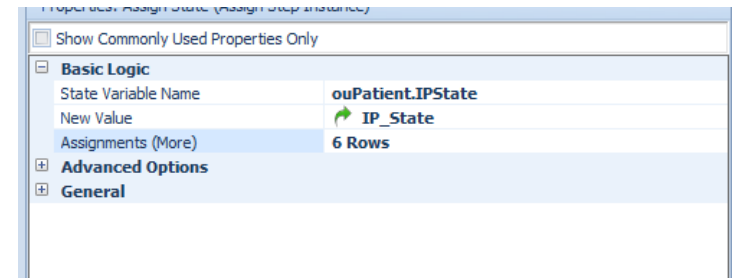

Patient arrival
process is
triggered

Patient exit
process is
triggered

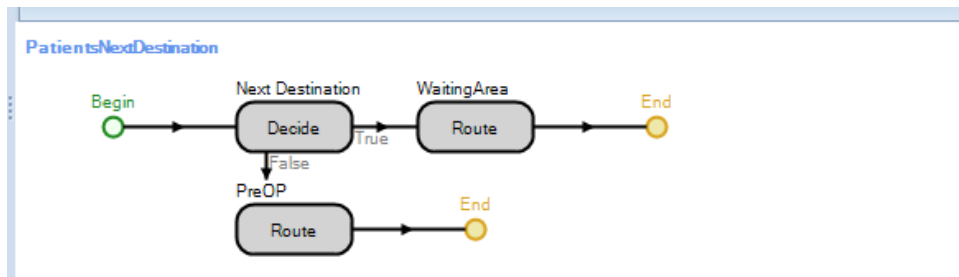

OR Patient Arrival

Arrival process
is triggered

Inpatient/Outpatient
state assigned to patient

Exit process is
triggered

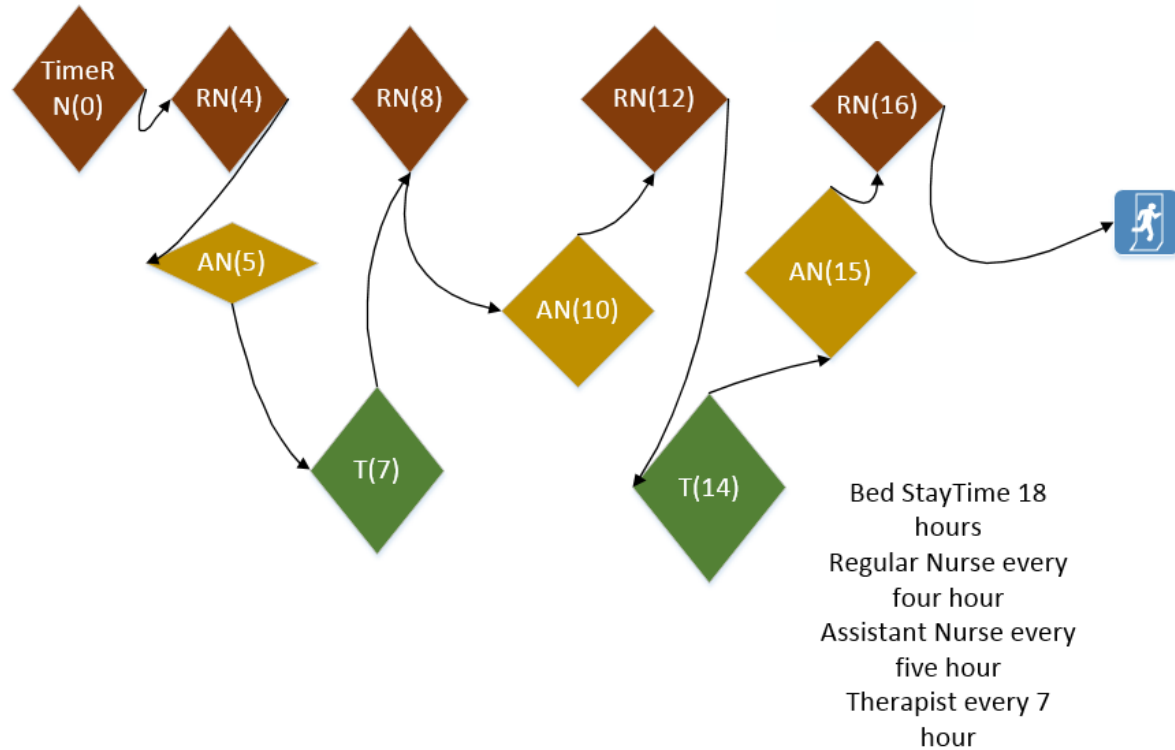

Assigning values
to route step

Bed Components

- Capacitated Bed Station element is created
- Bed processing logic
- External view
 - Bed Symbol
 - Basic Node, Transfer Node
 - A Queue

Bed Methodology Overview

Simio Add-ins

- Allow for data-driven model generation
- Implemented PCU Add-in
- Implemented Operating Theater Add-in

PCU Add-ins

- Data table generator add-in
 - Tables are: hospital data, resources and links
- Model object importer creator add-in
 - Objects are created

OR Data-driven add-in

- Four Add-ins were created

Case Studies

- Progressive Care Unit
 - Central Ohio Hospital
 - 10 beds
 - Analyze bed needs
- Operating Theater
 - North Ohio Large Hospital
 - Several surgery departments
 - Pilot on a small operating theater

PCU Case Study

Types of Patient

- Low Acuity
- Medium Acuity
- High Acuity

Inpatient Staffing Levels

- Number of Beds - 10
- Regular Nurse - 3
- Assistant Nurse - 2
- Therapist - 1

PCU Case Study

| Hospital Data | Resources | Link Table | | |
|---------------|---------------|---------------|--------------------|--------------------|
| | Resource Name | Resource Type | XLocation (Meters) | ZLocation (Meters) |
| 1 | Bed1 | Bed | 1 | -2 |
| 2 | Bed2 | Bed | 9 | -2 |

Data-driven simulation model of OR unit

OR Performance

| OR | Average patient time (Minutes) | Utilization (Percent) |
|-----|--------------------------------|-----------------------|
| OR1 | 67.12 | 49.17 |
| OR2 | 75.49 | 49.45 |
| OR3 | 70.66 | 39.99 |
| OR4 | 83.40 | 51.72 |
| OR5 | 66.95 | 50.60 |
| OR6 | 69.92 | 50.13 |
| OR7 | 42.59 | 48.046 |

Conclusion and Future Work

- Customized objects are reusable
- Four flexible add-ins of operating rooms are not limited to operating rooms
- Reconfiguration of data-driven model is faster
- Model will help to determine the resource requirements in their unit
- Two models can be integrated where patient after PACU transferred to PCU for recovery
- PCU bed can be used in other departments of hospital where similar rounding procedure is carried out like ICU
- Database connection
